Android vs iPhone: Samsung Galaxy S26 vs Apple iPhone 17

Constante, Nick · Group Dam 2 · Speaking & Listening task

	
Samsung Galaxy S26 (Android)	**Apple iPhone 17 (iOS)**

Comparison

1. Size & weight	Both phones have a 6.3-inch screen, so the display is as big on one as on the other. However, the Galaxy S26 is lighter than the iPhone 17 (167 g vs 177 g), so it is more comfortable to hold for a long time.
2. Age	The iPhone 17 is older than the Galaxy S26: it came out in September 2025, whereas the Galaxy S26 was released in March 2026. The Samsung is the newer one.
3. Design & screen	Both are compact and sleek. The Galaxy S26 has a Dynamic AMOLED 2X screen, while the iPhone 17 has a Super Retina XDR OLED with Dolby Vision. The iPhone is not as flexible as Android, but its look is simpler and more uniform.
4. Speed & performance	The Galaxy S26 is faster than the iPhone 17 in benchmark tests (about 11,200 vs 9,300 points) and it has more RAM (12 GB vs 8 GB). Even so, the iPhone 17 is not slow at all: iOS runs very smoothly.
5. Battery & durability	The Galaxy S26 has a bigger battery (4,300 mAh vs 3,692 mAh), so it lasts longer than the iPhone 17. On the other hand, the iPhone charges faster by cable (up to 40 W). Apple phones also tend to keep their value better.
Price	The Galaxy S26 is slightly cheaper than the iPhone 17 in the store I checked (899€ vs 1109€), so it is not as expensive as the iphone

My choice: the Samsung Galaxy S26

In my opinion, the Galaxy S26 is the better option for me. Firstly, it is lighter and its battery lasts longer, which is essential for a student who uses the phone all day. Secondly, it is faster and has more memory, so it is better for games and multitasking. Finally, it is a bit cheaper. The more I compare them, the more I prefer the Samsung. Although the iPhone 17 charges faster and is very smooth, the Galaxy S26 offers better value for money.
